ABSTRACTED-PUB-NO: DE 3124531A

BASIC-ABSTRACT:

Scrap or old polyethylene is used in the form of cut pieces for the prodn. of drainage mats, plates or webs. It need not be cleaned and is used in the state in which it is supplied. The cut pieces can be fused to form a solid composite whilst retaining water permeability.

Considerable savings are obtd. by using scrap instead of new polyethylene. The material has good mechanical strength and is very water-permeable. It is useful for protecting the outside walls of cellars from mechanical damage and the ground whilst providing drainage.
